

1 – Forklift with capacity of 1,6/2,0 T, with fork lifting of 2500mm from the ground and it must be in good condition and secure. This will be used to unload the truck, to move the material in the work area and also could be used for the installation. Only to handle the material after the discharge, can also be used a trans-pallet with minimum capacity of 1000 kg.

2 - Electrical Scissor Lift, which can rise up to the level of **6,8** m without twin wheels; the platform might be able to load at least 2 people and their tools.

Characteristics:

Capacity: at least 270/300kg.

Height at rest: lower than **2,30 m**.

Length: lower than **2,70 m**.

Width: lower than **1,10 m**.

The scissor Lift must be rented (if not already present on site with the same features) for at least 4\5 working days.
